

## Mapping of Course Outcomes with Question Papers

<b>Academic Year</b>	2021-22
<b>Batch</b>	2020-22
<b>Program</b>	MMS
<b>Specialization</b>	FMHO
<b>Semester</b>	II
<b>Course</b>	<b>Operations Research</b>
<b>Faculty</b>	Prof. Navin Bhatt

CO1: Recognize the importance and value of Operations Research and mathematical modelling in solving practical problems in industry

CO2: Formulate a managerial decision problem into a mathematical model

CO3: Identify OR models and apply them to real-life problems

CO4: Able to design new simple models, like: CPM, PERT to improve decision making and develop critical thinking and objectives analysis of decision problems

Question Number	CO 1	CO 2	CO 3	CO 4	CO 5

## TIMSR

**Program: MMS**
**Semester: II**
**Seat No:**
**Course: Operations Research**
**Duration: 2 Hours**
**Month & Year: October 2021**
**Marks: 40 marks**

<b>Course Outcomes:-</b>	
CO1	1. Recognize the importance and value of Operations Research and mathematical modeling in solving practical problems in industry
CO2	2. Formulate a managerial decision problem into a mathematical model
CO3	3. Identify OR models and apply them to real-life problems
CO4	4. Able to design new simple models to improve decision making and develop critical thinking and objectives analysis of decision problems
<b>Instructions:-</b>	
1	Question no. 1 is compulsory
2	Attempt any three out of remaining five questions

<b>Answer the following questions:-</b>		<b>Marks</b>																																	
1	<p>In a factory there are 4 machines and 4 jobs are to be done on one to one basis. The manager assess the profit for each jobs as given below:</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th colspan="2"></th> <th colspan="4"><b>Machines</b></th> </tr> <tr> <th colspan="2"></th> <th><b>A</b></th> <th><b>B</b></th> <th><b>C</b></th> <th><b>D</b></th> </tr> </thead> <tbody> <tr> <th rowspan="4"><b>Jobs</b></th> <th><b>I</b></th> <td>42</td> <td>35</td> <td>28</td> <td>21</td> </tr> <tr> <th><b>II</b></th> <td>30</td> <td>25</td> <td>20</td> <td>15</td> </tr> <tr> <th><b>III</b></th> <td>30</td> <td>25</td> <td>20</td> <td>15</td> </tr> <tr> <th><b>IV</b></th> <td>24</td> <td>20</td> <td>16</td> <td>12</td> </tr> </tbody> </table> <p>Assign the jobs to the machines so as to maximize the profit</p>			<b>Machines</b>						<b>A</b>	<b>B</b>	<b>C</b>	<b>D</b>	<b>Jobs</b>	<b>I</b>	42	35	28	21	<b>II</b>	30	25	20	15	<b>III</b>	30	25	20	15	<b>IV</b>	24	20	16	12	10 marks

Q2 a)	<p>A company has three facilities which extracts limestone from its three field sites which is then transported to four demand centres. The fields are F1 (yield of 7 metric ton), F2 (yield of 9 metric ton) and F3 (yield of 18 metric ton) with demand centres D1 (requirement of 5 metric ton), D2 (requirement of 8 metric ton), D3 (requirement of 7 metric ton) and D4 (requirement of 14 metric ton). The associated transportation cost per metric ton are given below in the table. Calculate a) Initial Feasible Solution using VAM, b) Is the solution degenerate?</p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th><b>D1</b></th> <th><b>D2</b></th> <th><b>D3</b></th> <th><b>D4</b></th> </tr> </thead> <tbody> <tr> <th><b>F1</b></th> <td>19</td> <td>30</td> <td>50</td> <td>10</td> </tr> <tr> <th><b>F2</b></th> <td>70</td> <td>30</td> <td>40</td> <td>60</td> </tr> <tr> <th><b>F3</b></th> <td>40</td> <td>8</td> <td>70</td> <td>20</td> </tr> </tbody> </table>		<b>D1</b>	<b>D2</b>	<b>D3</b>	<b>D4</b>	<b>F1</b>	19	30	50	10	<b>F2</b>	70	30	40	60	<b>F3</b>	40	8	70	20	6 marks

Q 4 a	A retailer has option of keeping stock of 15, 16, 17 or 18 units. Only one stock level can be maintained. Demand in the market can vary. It can be 15, 16, 17 or 18 units. Probabilities associated with demand levels are 0.1, 0.2, 0.4 and 0.3 respectively. Cost per unit for retailer is Rs. 5 and selling price is Rs. 8 per unit. Unsold quantity can be sold as scrap at Rs. 2 per unit. Find EMV and recommend optimal decision.	6 marks																																																				
Q4 b	Explain minimax regret criterion and Laplace criterion of decision making.	4 marks																																																				
Q 5 a	Furniture World Ltd. produces two products chair and table, with the help of machinery and labours. To produce one unit of chair 20 machine hours and 5 labour hours are required. To produce one unit of table 10 machine hours and 50 labour hours are required. Maximum 500 machine hours and 300 labour hours can be utilized for production. Profit per unit of chair is Rs. 50 and table is Rs. 20. Formulate LPP and solve the problem by simplex method.	6 marks																																																				
Q 5 b	Write short notes on – a) Decision Tree b) Duality in LPP	4 marks																																																				
Q 6 a	ABC motorcycles Ltd manufactures around 200 motorcycles. Depending upon the availability of raw materials and other conditions, the daily production has been varying from 196 motorcycles to 204 motorcycles, whose probability distribution is as given below – <table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td style="text-align: center;">Production per day</td> <td style="text-align: center;">196</td> <td style="text-align: center;">197</td> <td style="text-align: center;">198</td> <td style="text-align: center;">199</td> <td style="text-align: center;">200</td> <td style="text-align: center;">201</td> <td style="text-align: center;">202</td> <td style="text-align: center;">203</td> <td style="text-align: center;">204</td> </tr> <tr> <td style="text-align: center;">Probability</td> <td style="text-align: center;">0.05</td> <td style="text-align: center;">0.09</td> <td style="text-align: center;">0.12</td> <td style="text-align: center;">0.14</td> <td style="text-align: center;">0.20</td> <td style="text-align: center;">0.15</td> <td style="text-align: center;">0.11</td> <td style="text-align: center;">0.08</td> <td style="text-align: center;">0.06</td> </tr> </table> <p>The finished motorcycles are transported in a specially designed three – storeyed truck that can accommodate only 200 motorcycles. Using the following 15 random numbers 82, 89, 78, 24, 53, 61, 18, 45, 04, 23, 50, 77, 27, 54 and 10, simulate (for 15 days) the process to find out a) what will be the average number of motorcycles waiting in the factory? b) what will be number of empty spaces in the truck?</p>	Production per day	196	197	198	199	200	201	202	203	204	Probability	0.05	0.09	0.12	0.14	0.20	0.15	0.11	0.08	0.06	6 marks
